

# PerioPal Announces a New Release—The Fastest, Most Affordable Periodontal Charting Software Yet

## NOW YEARLY, UNLIMITED USE AT \$199

BEAUMONT, TEXAS—November 22, 2010—PerioPal LLP today introduced a new release that is packed with unique features that allow clinicians to get more out of periodontal charting software. From the way the software is licensed to the efficient way the exam can be performed, PerioPal 9.0 has been built for usability.

PerioPal periodontal charting software is now a yearly subscription service for an unlimited number of users per location. There are no set-up, cancellation, maintenance, or hidden fees. PerioPal offers a free 30 day trial that is 100% functional giving users full access to all the charting features. At the end of the trial period, users activate a yearly subscription.

“The move to an annual subscription approach encourages the use of an improved periodontal system enabling the practice to spread the expense of a new solution across different cost centers – hardware, integration, and training”, says Kimberly Goodson, President. “And with a breakthrough price of \$199 per server, we are thrilled to get PerioPal into the hands of even more clinicians who want a comprehensive, yet affordable periodontal charting system. With PerioPal, affordability is not less.”

PerioPal offers new functionality to accurately and efficiently record multiple data entries with a single command -- especially conditions relating to Localized Gingivitis and Early Periodontitis. While PerioPal was built for voice recognition, the latest PerioPal application makes the manual entry of periodontal data better than ever for clinicians who practice assisted hygiene.

### **With PerioPal, Affordability is Not Less**

PerioPal is proven periodontal charting software with two free download versions, the Single PC and the Network Install. Software features include customized voice commands for speed and accuracy, manual entry for assisted hygiene (non-voice option), unlimited users and workstations, evidence-based diagnosis, Universal and FDI Numbering Systems, exportable PDF reports, single pass data capture, auto advance options, easy data modification, stand alone or network ready, integration with dental systems, real time alerts and follow up options, large visual display, patient education, self-directed training materials, and comparative exam analysis.

The new subscription platform reflects an ongoing PerioPal strategy to make a high-quality solution attractive so clinicians can add a wider range of periodontal functionality to a new or existing dental system. “It’s time to

change in our charting notions -- a complete and adequate periodontal evaluation is much more than 6 numbers in a box. By combining a sensible pricing model with a comprehensive recording solution, the limits of traditional periodontal charting methods are now liberated activating the clinician's skills and enhancing overall periodontal performance," says Goodson.

**Pricing and Availability:**

The PerioPal annual subscription is priced at \$199 per server based on one server per location. An unlimited number of users/workstations can record, report and share PerioPal exams.

PerioPal 9.0 is available at [www.periop.com](http://www.periop.com)
