

How to Download and Install Network version of PerioPal:

3. Download PerioPal

1. **Click Network Install**

PerioPal is a secure website.

2. Download **PPserver.zip** to your server.

3. Unzip **PPserver.zip** saving the folder PPserver and its contents on a sharable Read/Write drive.

4. Install the software. Register the program. Only one workstation should have to be registered.

5. **For each workstation** (including the Server if it will be used as a PerioPal workstation - but not recommended):

a) Find the **PPserver** folder on a network drive.

NOTE: If it is not there, you may need to create a network drive that connects to the shared drive on your server

b) Open PPserver and double click **workstation_install.exe** (It must be run from PPserver **not copied**)

NOTE: workstation_install will save settings on that workstation that tells PerioPal where to find the PPserver and installs PerioPal on the workstation.

6. Run PerioPal

PerioPal comes Network Ready. We are dedicated to providing our clients with the best resources available.

If you would like assistance with Networking, please contact **customerservice@periopal.com**.

NOTE: We do not perform networking services, however we can connect you with a Certified PerioPal Engineer to receive a custom quote for this option.
